

INTRODUCTION TO

GREENHAVEN

Presented by Arwa

INTRODUCTION

Gardening is a fulfilling and therapeutic pastime that connects us with nature. Whether you're cultivating flowers, vegetables, or herbs, many people struggle to find the time to enjoy a vibrant garden in fresh air. That's why I introduce you to Greenhaven, a solution to help your garden flourish and look lush.

GARDENR ENDPOINTS

Request Assignment

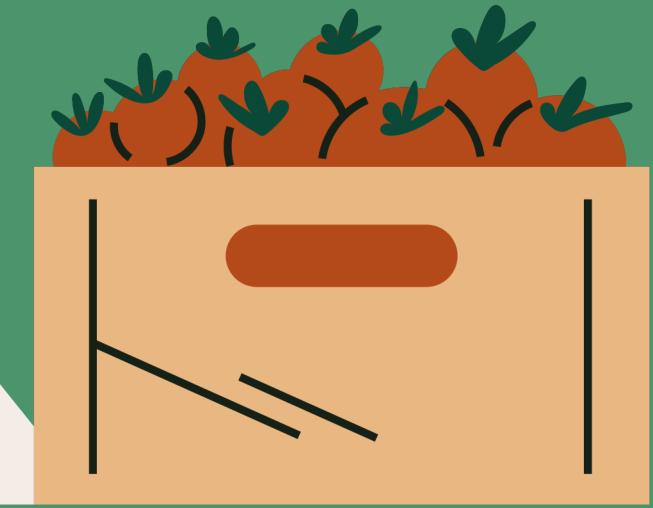

Requests are assigned to available gardeners

Available Gardeners

Lists gardeners who are currently available based on their assignments.

Workload Calculation

The system calculates the total workload for each gardener based on assigned requests.

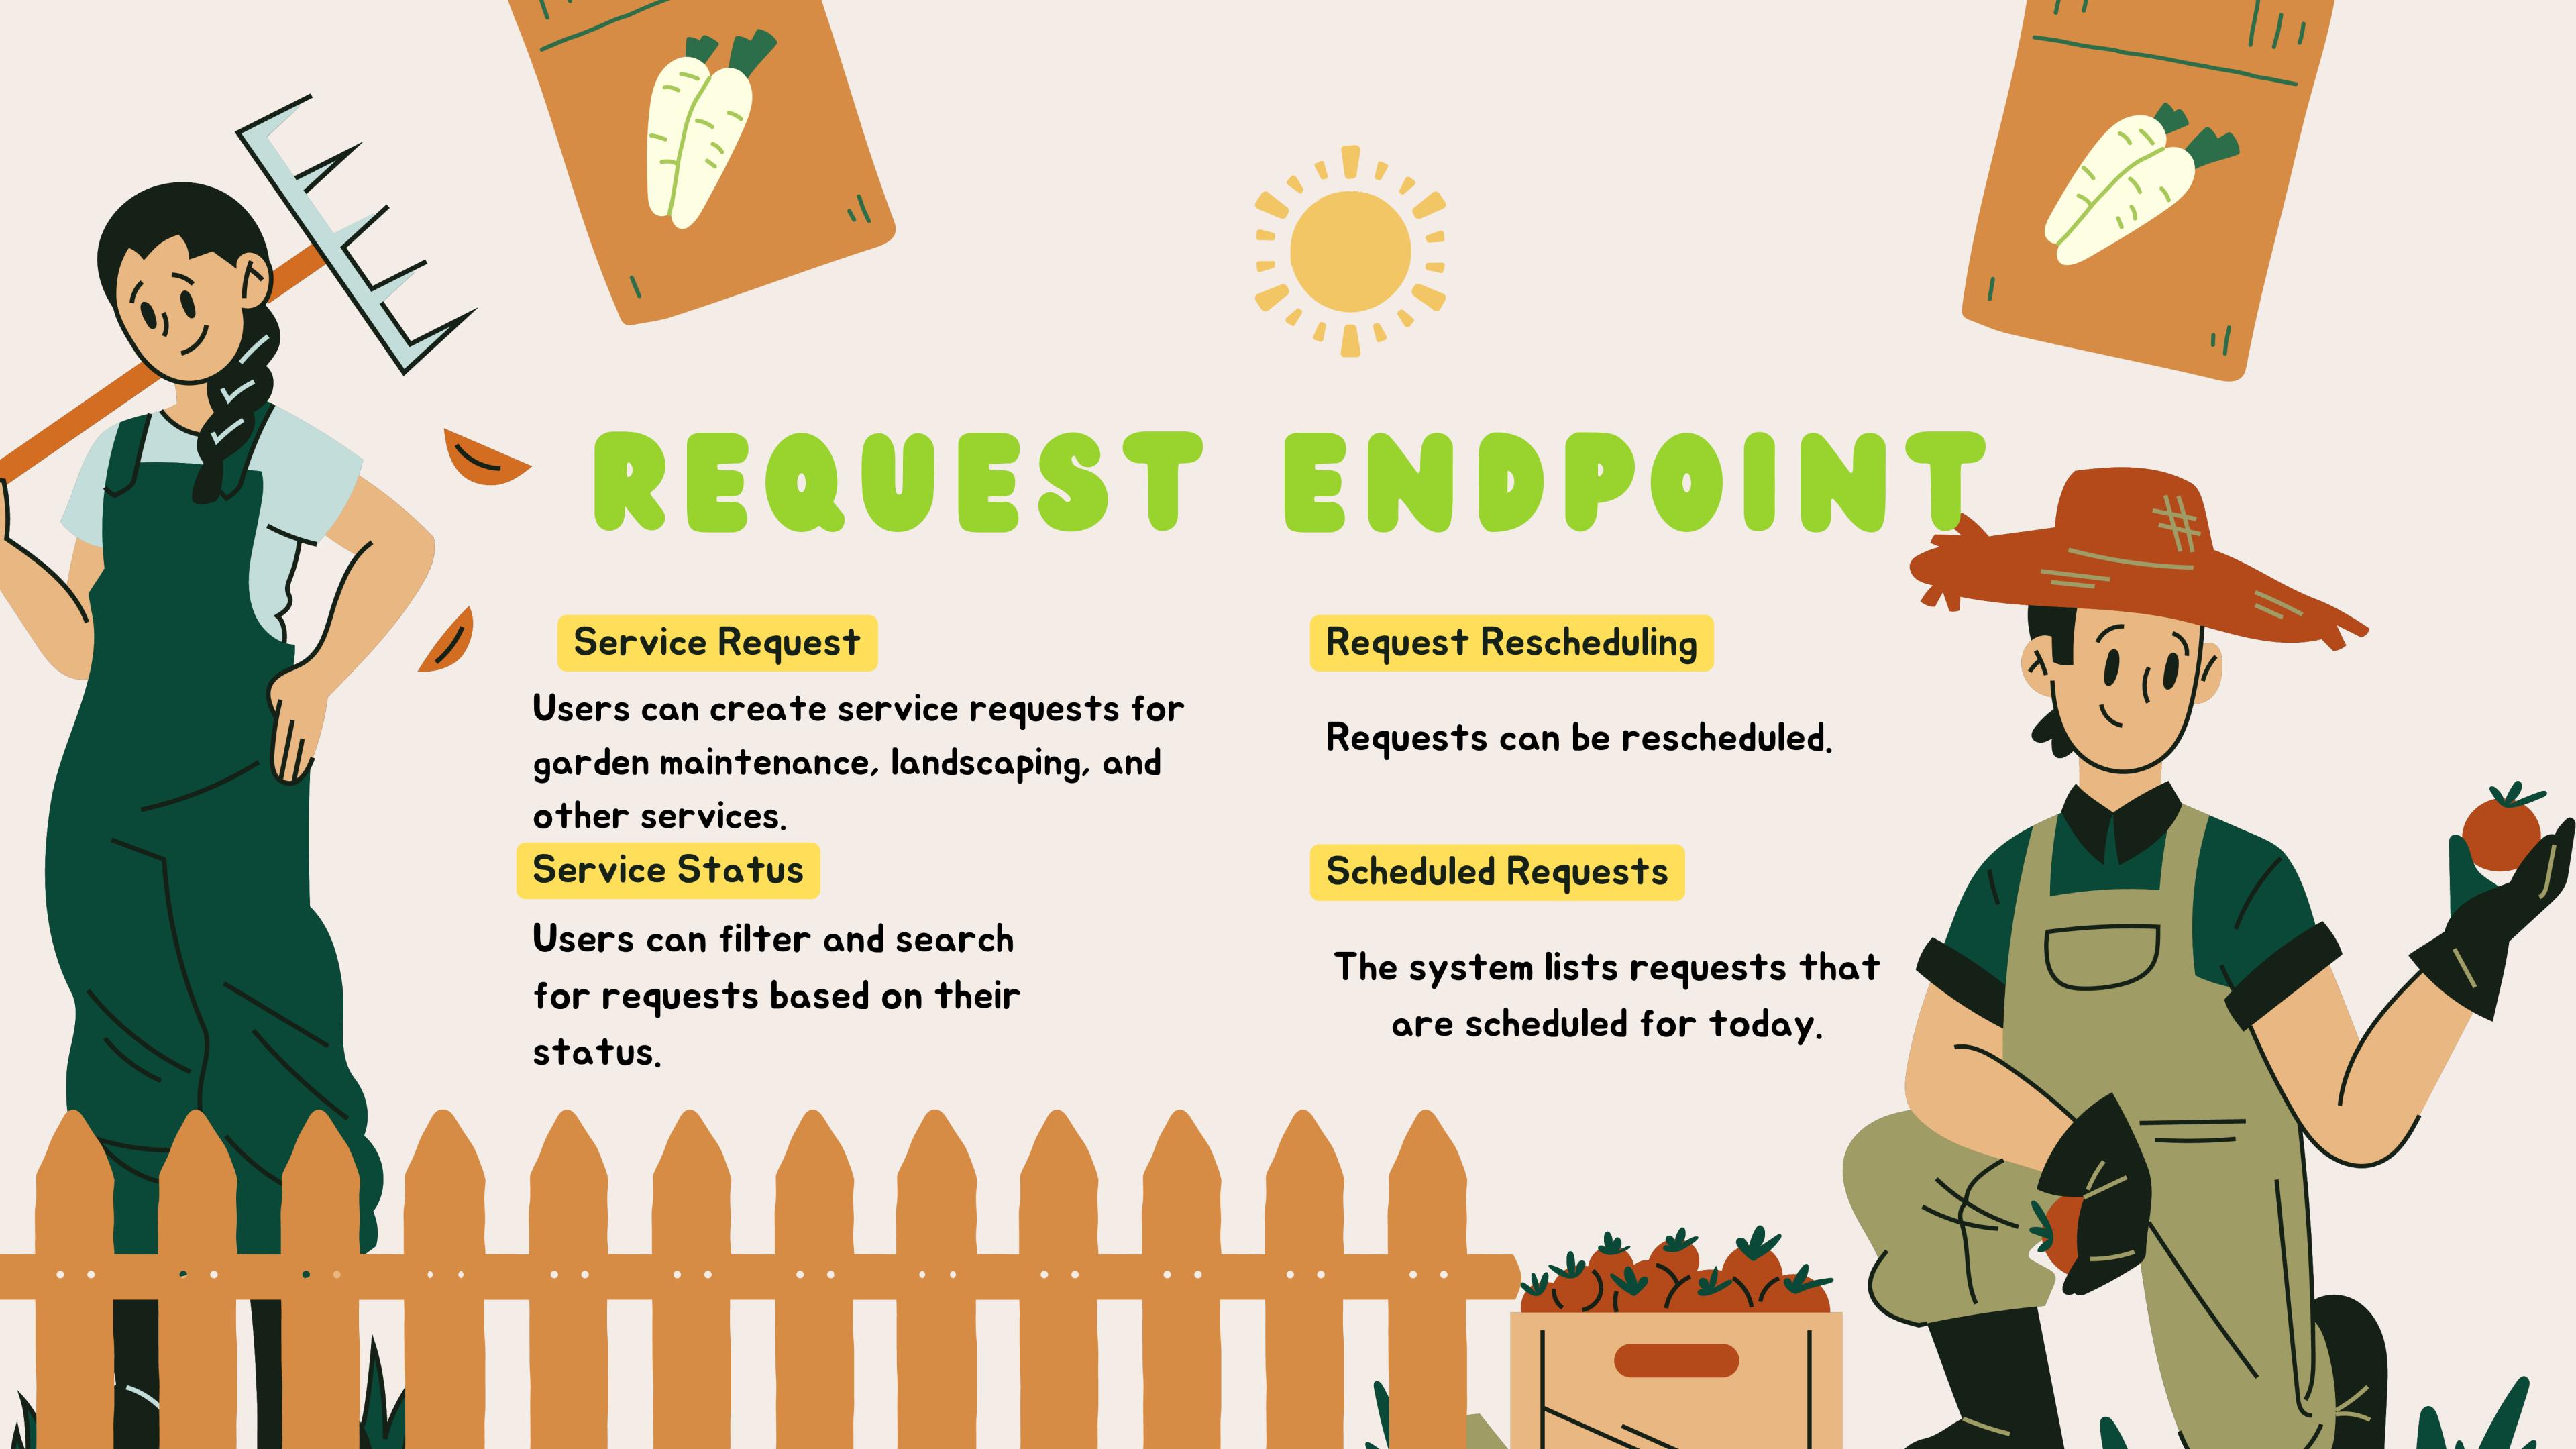

GARDEN ENDPOINTS

Recommend Plants for
Gardens

Based on the size of the garden,
the system suggests appropriate
plants.

REQUEST ENDPOINT

Service Request

Users can create service requests for garden maintenance, landscaping, and other services.

Service Status

Users can filter and search for requests based on their status.

Request Rescheduling

Requests can be rescheduled.

Scheduled Requests

The system lists requests that are scheduled for today.

PLANTS ENDPOINT

Water Requirement Checking

When users provide a plant ID and a water amount, the system verifies if the water provided is sufficient, and if not, it shows the required water amount.

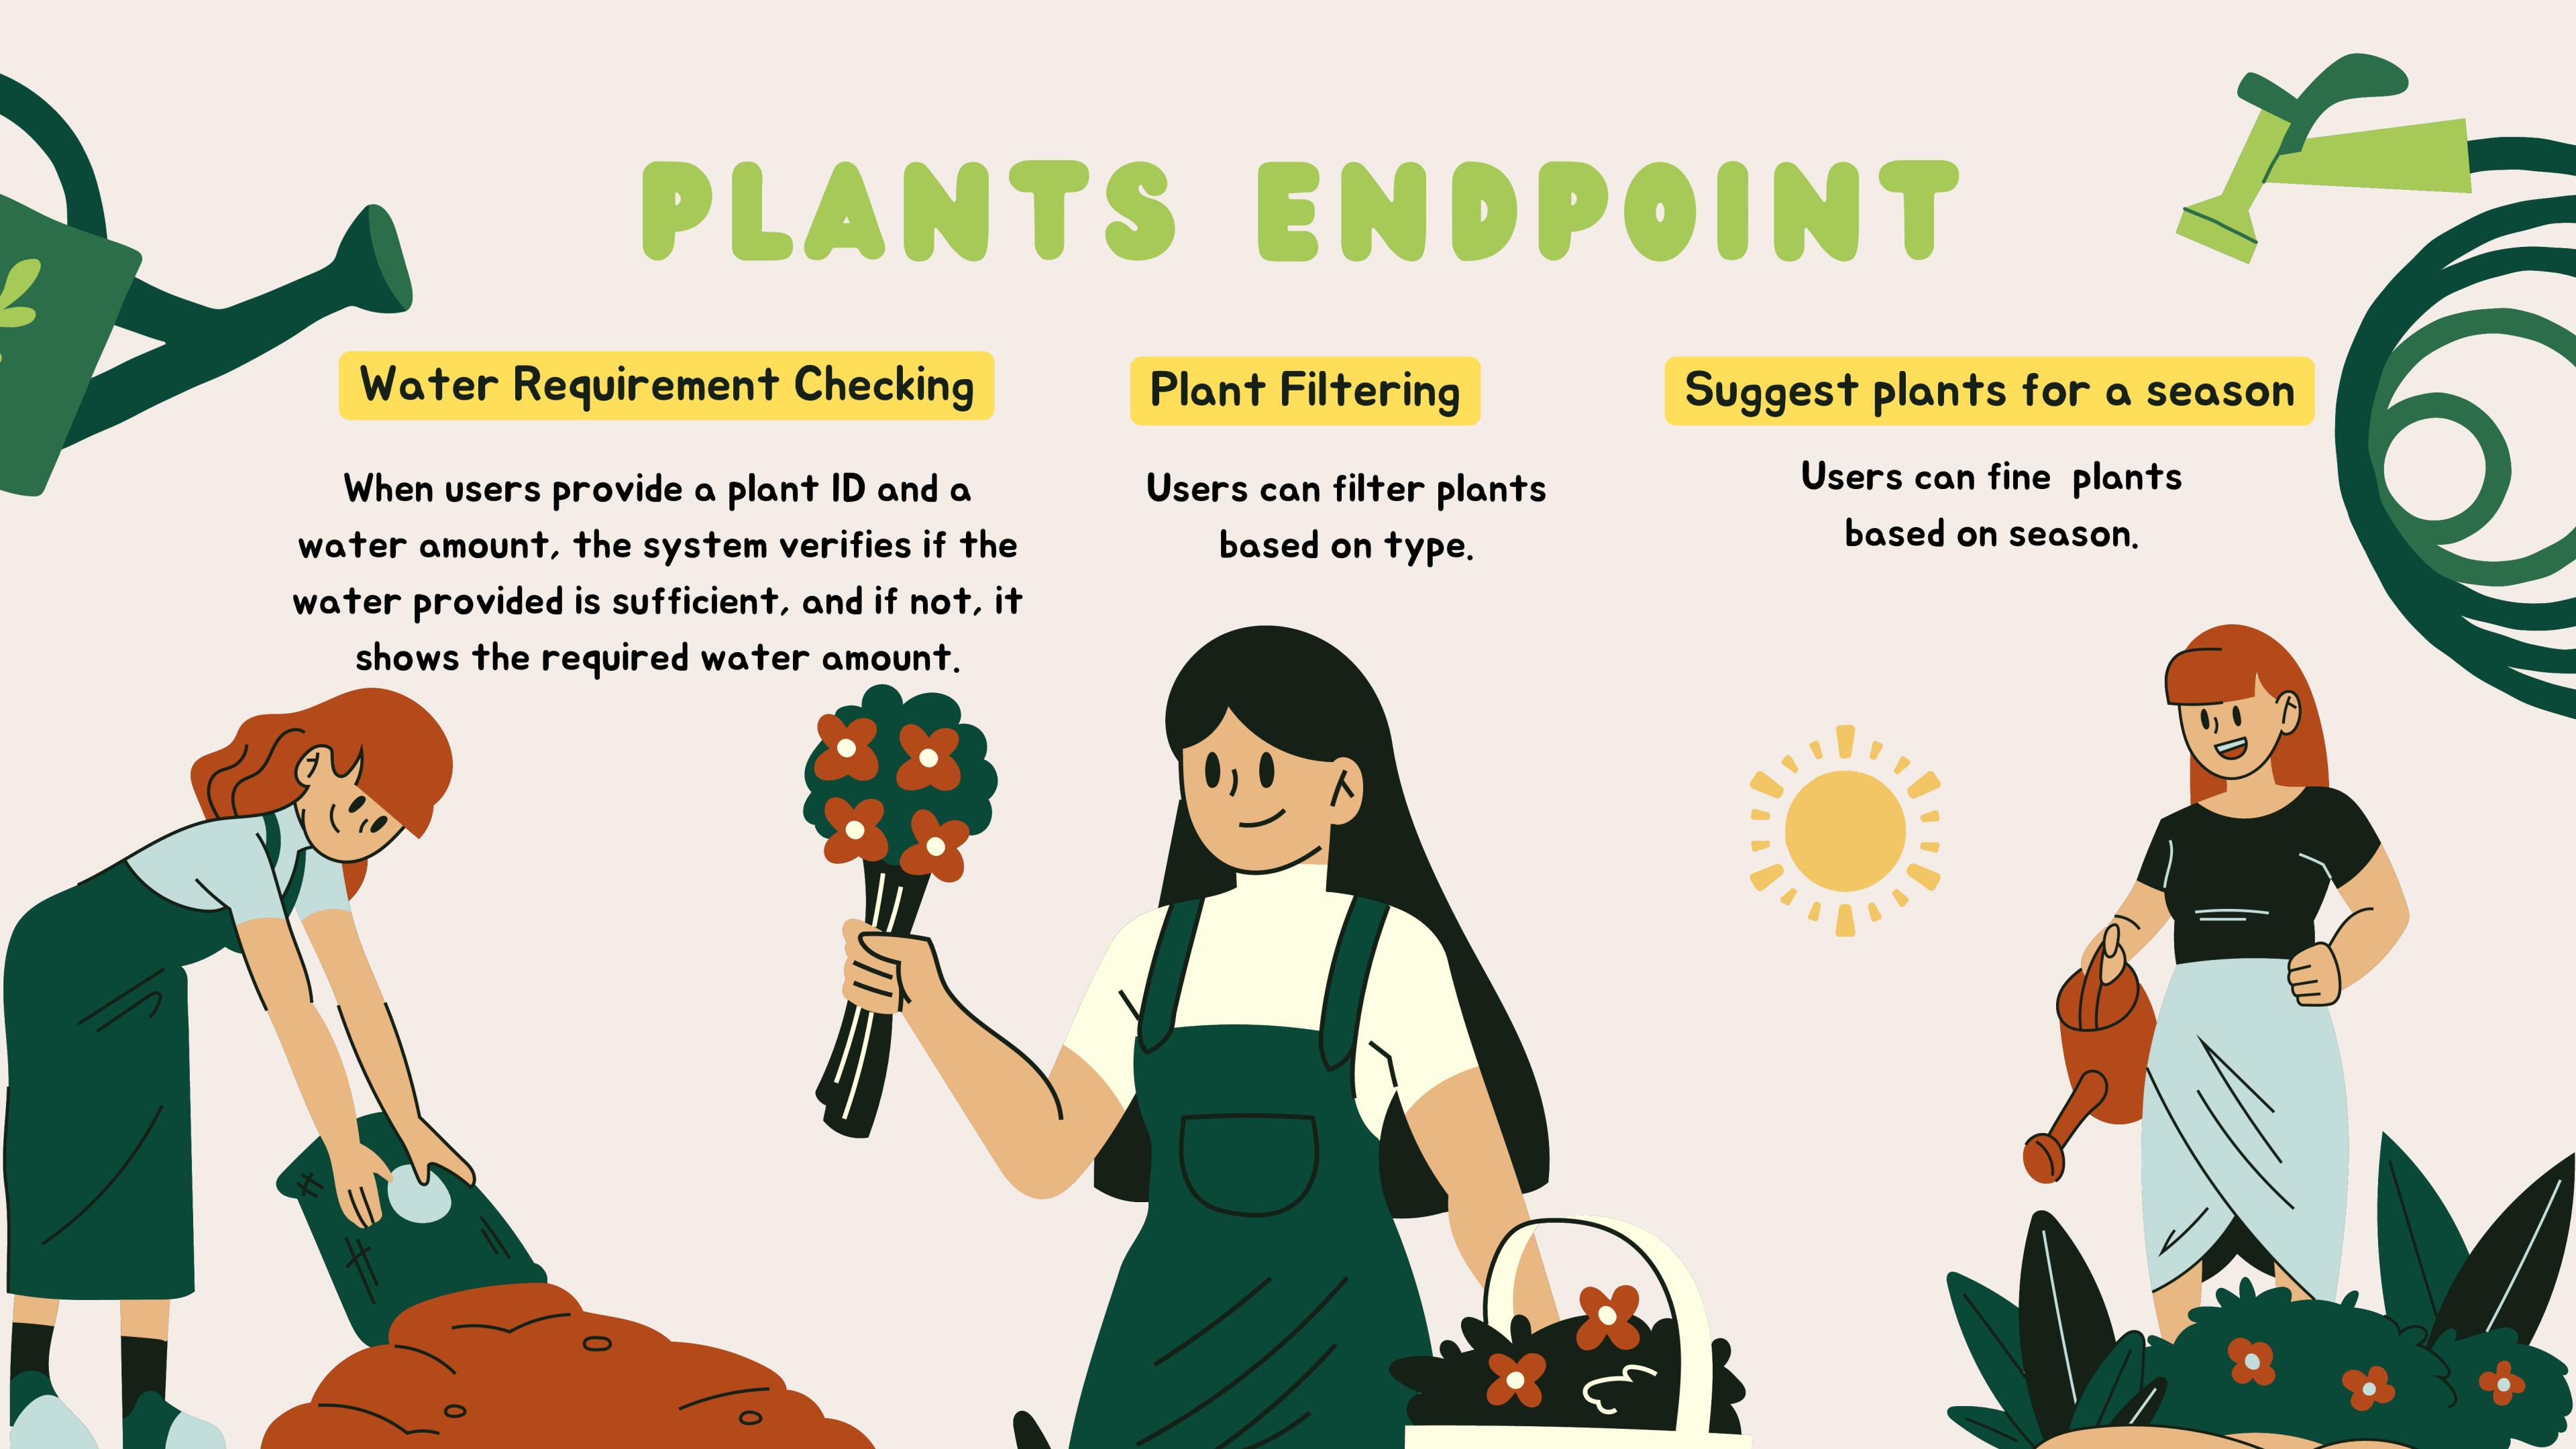

Plant Filtering

Users can filter plants based on type.

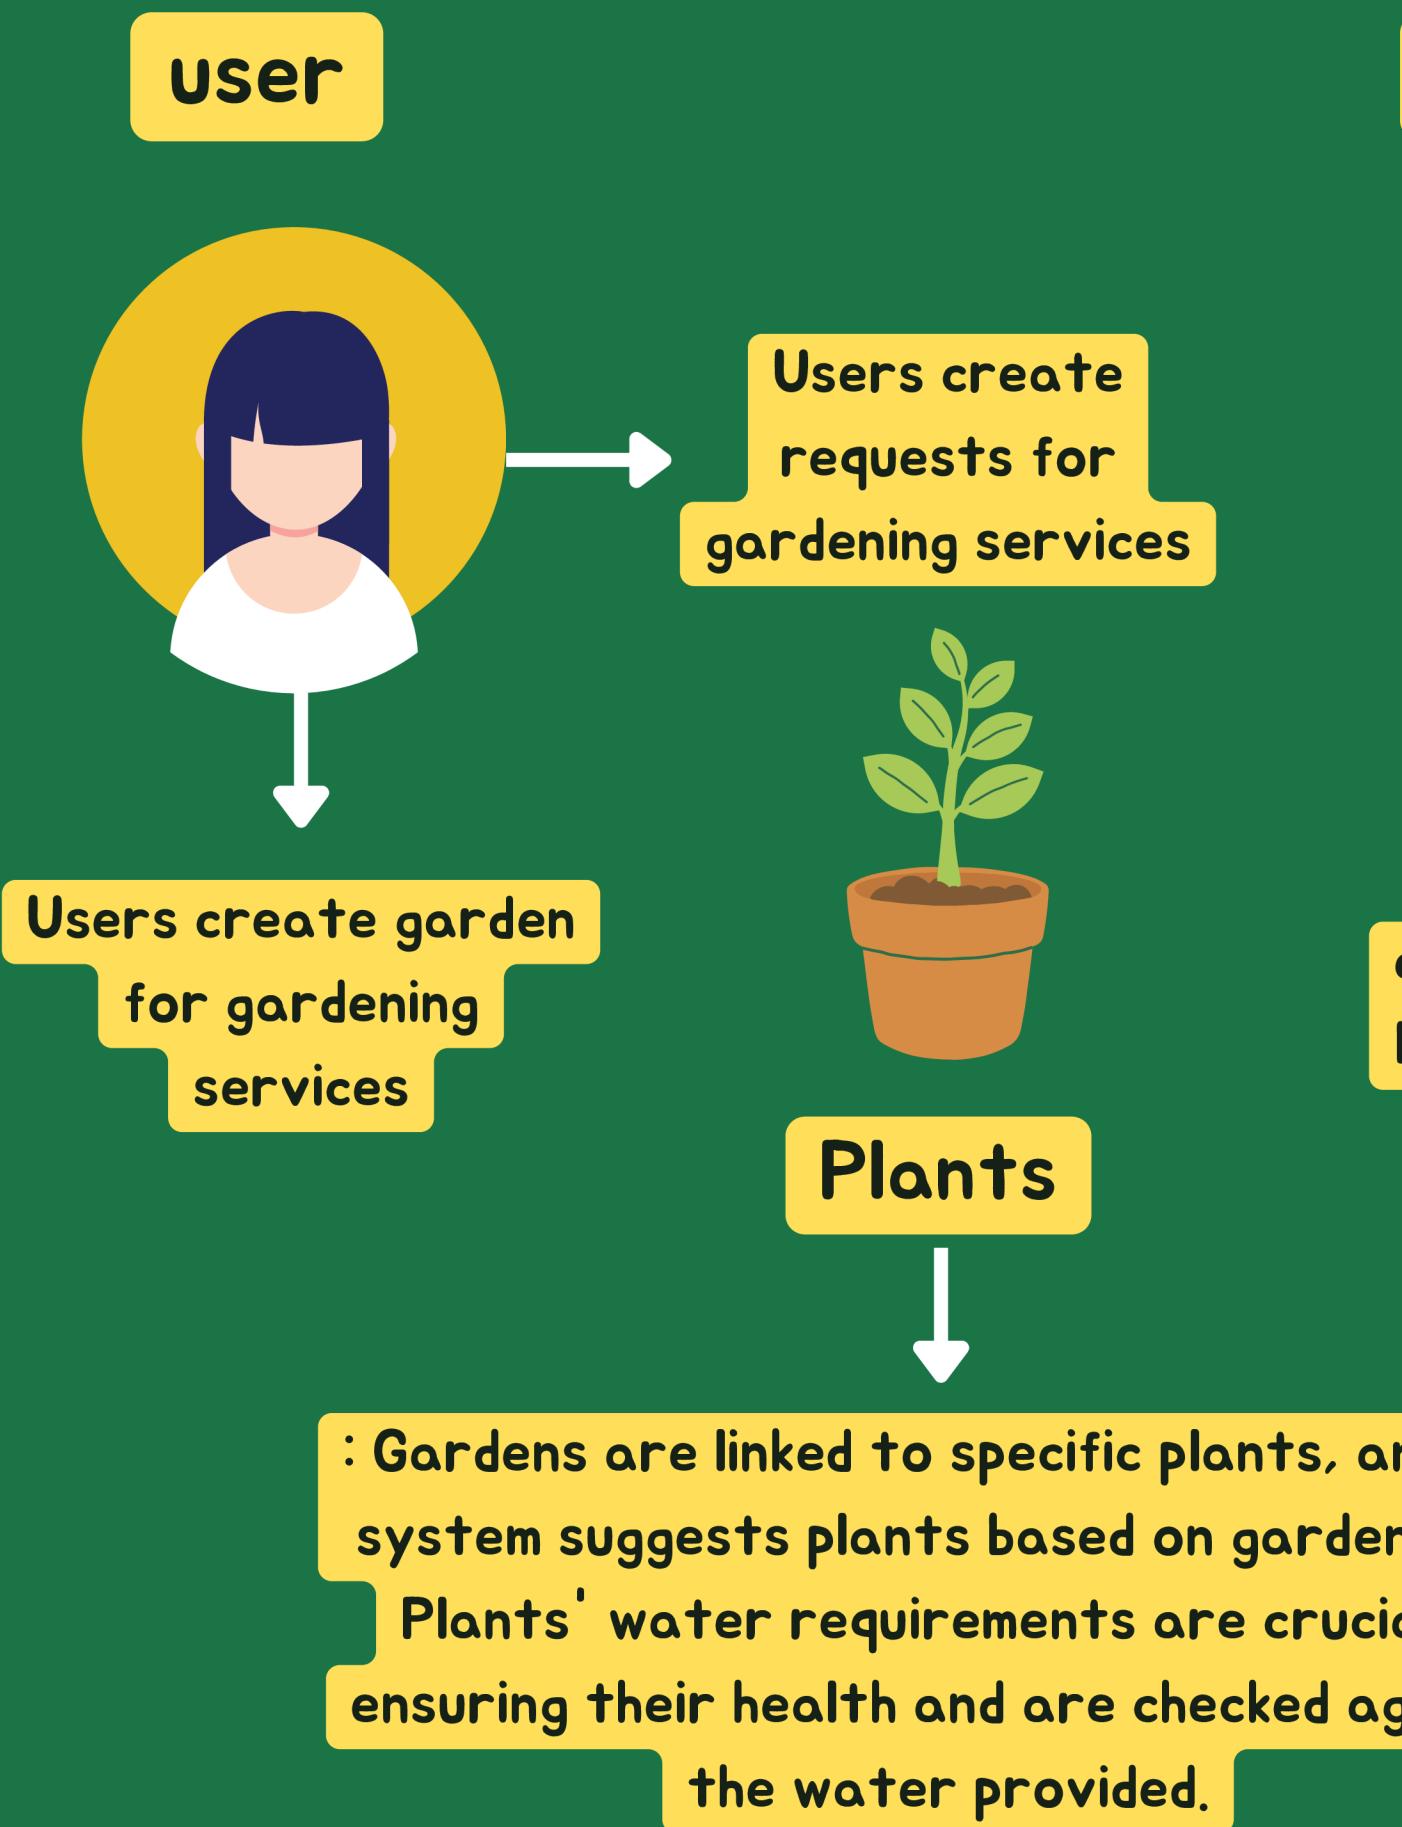

Suggest plants for a season

Users can find plants based on season.

SYSTEM FLOW

THANK YOU
SO MUCH!
